

Secoroc DTH Hammers

Product information

Atlas Copco Secoroc offers the market's most comprehensive range of DTH hammers. There are hammer solutions for water well drillers, miners and quarry drillers as well as for contractors in construction, oil and gas. We even offer environmentally friendly water-lubricated hammers and the reverse circulating RC hammers aimed at Green Field exploration.

Secoroc DTH hammers are available in holes sizes from 3,5 to 48 inches in diameter and up to 72 inches with the Secoroc Cluster drills.

Features & benefits

- ▶ Improves your productivity and capability
- ▶ Comprehensive range of DTH hammers and drill bits to match all conceivable applications
- ▶ Cutting edge technology that has been tested and proven through years of field use

Worn hammer? Rejuvenate it with the Atlas Copco Economy Kit

Traditionally, a DTH hammer has to be replaced when it is either worn out externally or the penetration rate has dropped by 20% or more

That's not the case with an Atlas Copco Secoroc hammer. With our Economy Kit -- consisting of top sub, cylinder, chuck and all the O-Rings (excluding the Stop-ring) -- you can readily replace worn components.

This way you'll be able to rebuild your hammer at least once -- with no drop in performance -- before it's time to invest in a new one.

Hammer Economy Kit

Sustained Hammer Efficiency
